

## In Class Assignment:

### Complete the functions used in jsFundamentals.html

Create a function in myFirstJavascript.js called funWithArrays. This is the function that will be called when the user clicks on the Fun With Arrays button. Add this function call to the onclick attribute of that button.

**funWithArrays** – this function should use document.write to print the sum, the min, the max and the average of the array, arr. Create separate functions to calculate and return each value – getSum(), findMin(), findMax(), average(). document.write does not print a new line at the end of printing. To print on a new line, use the <br> HTML element.
